USER GUIDE

DOCUMENT CHANGE HISTORY

Version	Date	Authors	Description of Change
1.0	DEC 2, 2021		Initial release

Welcome! There are two key things you should do right away:

0. Sign up for the [NVIDIA Developer Program](#) – this enables you to ask questions and contribute on the [NVIDIA Jetson Forums](#), gives access to all documentation and collateral on the [Jetson Download Center](#), and more.
1. Read this User Guide! After that, check out these important links:
 - [Jetson FAQ](#) – Please read the FAQ.
 - [Support Resources](#) – This web page links to important resources, including the Jetson Forum and the Jetson Ecosystem page.
 - [NVIDIA Jetson Linux Driver Package Release Notes](#) –Jetson Linux Driver Package is a key component of the Jetson platform, and provides the sample filesystem for your developer kit. Please read the latest release notes.

Thanks,
Wisdom Starry -- the NVIDIA Jetson Partner's team

GETTING STARTED

The Development System provides a full-featured development platform designed to get you up and running NVIDIA JETSON quickly. The included carrier board exposes many standard hardware interfaces, enabling a highly flexible and extensible platform for rapid prototyping.

NVIDIA JetPack™ SDK supports both your Development System and host development platform. It includes:

- Sample Linux filesystem with NVIDIA drivers
- AI and Computer Vision libraries and APIs
- Developer tools
- Documentation and sample code

Before using your Development System, you must install JetPack. A Linux host computer is required; for details, see [How to Install JetPack](#), below.

Minimum system requirements for the host computer are:

- Ubuntu Linux x64 v18.04
- A valid Internet connection
- At least 23GB of disk space

INCLUDED IN THE BOX

The Development System includes:

- NVIDIA Jetson Xavier™ NX module (P3668) with thermal solution
(Or NVIDIA Jetson™ TX2-NX module (P3636) with thermal solution)
- Reference carrier board (WS-MDN-501)
- Power supply with 12V5A AC cord

1.2 Description of interface

1.2.1 MICRO HDMI

pin	Signal	pin	Signal
1	Hot Plug Detect	2	Utility
3	TMDS Data2+	4	TMDS Data2 Shield
5	TMDS Data2-	6	TMDS Data1+
7	TMDS Data1 Shield	8	TMDS Data1-
9	TMDS Data0+	10	TMDS Data0 Shield
11	TMDS Data0-	12	TMDS Clock+
13	TMDS Clock Shield	14	TMDS Clock-
15	CEC	16	DDC /CEC Ground
17	SCL	18	SDA
19	+5V Power		

1.2.2 USB 3.0

pin	Signal	pin	Signal
1	VBUS	2	USB 2.0 D-
3	USB 2.0 D+	4	GND
5	SSRX-	6	SSRX+
7	GND	8	SSTX-
9	SSTX+		

1.2.3 USB-OTG

pin	Signal	pin	Signal
1	VBUS	2	USB 2.0 D-
3	USB 2.0 D+	4	USB ID
5	GND		

1.2.4 USB 2.0 Socket

pin	Signal	pin	Signal
1	5V	2	USB 22_ D_N
3	USB 22_ D_P	4	GND

1.2.5 I²S Sound

pin	Signal	pin	Signal
1	VDD_5V_IN	2	GND
3	GPIO12_LS	4	GPIO09_LS
5	I ² C2_SCL_LS	6	I ² SO_SCLK_LS
7	I ² C2_SDA_LS	8	I ² SO_SDOOUT_LS
9	I ² SO_LRCK_LS	10	I ² SO_SDIN_LS

1.2.6 FAN_PWM

pin	Signal	pin	Signal
1	GND	2	+5V
3	FAN_TACH_CON	4	FAN_PWM

1.2.7 Gigabyte LAN

pin	Signal	pin	Signal
1	TP0+	2	TP0-
3	TP1+	4	TP2+
5	TP2-	6	TP1-
7	TP3+	8	TP3-

1.2.8 12V POWER

pin	Signal	pin	Signal
1	12V	2	GND

Voltage range +12V

1.2.9 5V POWER

pin	Signal	pin	Signal
1	5V	2	GND

Voltage range +5V

1.3.1 Extension 40pin

pin	Signal	pin	Signal
1	3.3V	2	3.3V
3	UART0_TX	4	UART0_RX
5	UART1_RX	6	UART1_TX
7	GPIO_0	8	GPIO_1
9	GPIO_2	10	GPIO_3
11	I ² C_GP1_CLK	12	I ² C_GP1_DAT
13	RECOVERY	14	RTC_BAT_INPUT
15	RESET	16	PC_LED+
17	POWER_BUTTON	18	PC_LED-
19	GND	20	GND
21	-	22	-
23	CAN0H*	24	CAN0L*

*Pin 23 24 only for NX module use

1.3.1.1 URAT0

pin	Signal	pin	Signal
3	UART0_TX	4	UART0_RX

*:URAT0 for UART console Print debug information, device name /dev/ttyTHS0

Tools can be used for referencecutecom: `sudo apt-get install cutecom`

Connect NX/NANO with HOST program cutecom, Baud rate 115200/8N1.

1.3.1.2 URAT1

pin	Signal	pin	Signal
5	UART1_RX	6	UART1_TX

*:device name /dev/ttyTHS0

1.3.1.3 CAN0

pin	Signal	pin	Signal
23	CAN0H	24	CAN0L

1.3.1.4 GPIO

pin	Signal	pin	Signal
7	GPIO_0	8	GPIO_1
9	GPIO_2	10	GPIO_3

*:GPIO TEST:

```
#check gpio
cd /sys/class/gpio
#load gpio
echo '388' | sudo tee /sys/class/gpio/export
echo '298' | sudo tee /sys/class/gpio/export
echo '480' | sudo tee /sys/class/gpio/export
echo '486' | sudo tee /sys/class/gpio/export
#set gpioOutput direction
cd gpio388
echo 'out' | sudo tee /sys/class/gpio/gpio388/direction
#gpio 3.3v
echo '1' | sudo tee /sys/class/gpio/gpio388/value
#gpio 0v
echo '0' | sudo tee /sys/class/gpio/gpio388/value
#set gpio lutput direction, File directory /sys/class/gpio
#check gpio value, set input value 0
cat ./gpio480/value (print 0, )
echo 'in' | sudo tee /sys/class/gpio/gpio480/direction
#High level, 3.3v,retune 1
cat /sys/class/gpio/gpio480/value
```

1.3.1.5 I²C

pin	Signal	pin	Signal
11	I ² C_GP1_CLK	12	I ² C_GP1_DAT

*:I²C TEST:

```
#check I2C BUS
sudo i2cdetect -l
# Check whether the slave device is identified on the bus (the bus ID is the bus number), and the result
shows that there is a number and UU on behalf of the device
sudo i2cdetect -y BUSID
#Read 16 bit data (busid is bus number) (W writes 2 bits) ((0x50 is the address corresponding to the number
and Uu), (0x00; 0x20 is the register address) (R is to read 16 bits)sudo i2ctransfer -f -y BUSID w2@0x50 0x00 0x20
r16
#Write 4-bit data (busid is the bus number) (W writes 4 bits) ((0x50 is the address corresponding to the
number and Uu), (0x00; 0x20 is the deposit address) (0x77-0x77 is the new content to be modified))
sudo i2ctransfer -f -y BUSID w4@0x50 0x00 0x20 0x77 0x77
```

2、 System flashing

2.1 Prepare

Download Image compression package

[Jetson Download Center.](#)

2.2 Flashing

(1) Assemble carrier board+NANO/TX2-NX/Nx core module+ Radiator, connect 12V2pin green terminal power supply;

(2) Used to enter Force Recovery Mode. Button is held down while either system is first powered on, or by

pressing & releasing reset button while Recovery button is pressed.

(3) To determine whether or not to enter the recovery mode successfully, you can use the lsusb command to check whether there are "NVIDIA Corp" devices.

```
hcq@ubuntu:~$ lsusb
Bus 001 Device 004: ID 0955:7c18 NVidia Corp.
Bus 001 Device 001: ID 1d0b:0002 Linux Foundation 2.0 root hub
```

如图所示即表示已进入 recovery 模式

(4) following to install.sh The text description when the run is completed, or the readme.txt The introduction of the document flash.sh Burning operation. For example: burning records

```
sudo ./flash.sh jetson-xavier-nx-devkit-emmc mmcblk0p1
```

```

```

2.3 flashing custom image

2.3.1 Backup custom image:

```
sudo ./flash.sh -r -k APP -G backup.img jetson-xavier-nx-devkit-emmc mmcblk0p1
```

Generated backup.img.raw Image file of (recommended to be compressed to zip file storage)

2.3.2 Restore custom image:

Copy the image of to Linux_for_Tegra / bootloader / directory and rename to system.img

```
sudo mv backup.img.raw bootloader/system.img
```

```
cd Linux_for_Tegra/bootloader/
```

```
sudo ./flash.sh -r jetson-xavier-nx-devkit-emmc mmcblk0p1
```

Note: - r parameter refers to using the system.img to flash.

Note: both backup and recovery must be in the mode of receiver.
